Stoneridge's new tachograph, built on customer needs

Today Stoneridge announced the launch of its new digital tachograph – the SE5000 Exakt Duo², the smartest One Minute Rule tachograph yet. The SE5000 Exakt Duo² promises Working Time Directive calculations, an Advanced Period of Availability mode, Real-time ferry & train support and many more handy features.

In addition to the already existing benefits such as real-time updates and countdowns on drive and rest times, the SE5000 Exakt Duo² will have a wealth of new features. Fleets can now benefit from an **advanced Period of Availability (POA) mode**, allowing drivers to set how POA should be counted, giving them a more accurate view of their break and rest time. This will not only put drivers in control but will ensure they make best use of their working day.

Victoria Tramma, Marketing and Central Sales Manager at Stoneridge, explains: “Whether a driver, fleet manager or workshop engineer, our customers had a say in what goes into the new SE5000 Exakt Duo².”, adding: “All features have been perfectly tailored to our customer’s needs and will help them to plan their week more effectively.”

Following demand from fleets Stoneridge has included **Working Time Directive (WTD) calculations** in their Duo technology. Drivers that do a lot of work that is not driving will be pleased to see a new screen that warns them when approaching their Daily and Weekly Working Time limit. This will keep them more informed, helping to reduce infringements and costly fines.

Moreover, **real-time ferry & train** calculations during the journey will enable drivers to get an accurate view of remaining drive and rest times. A range of enhancements to the user interface will help save time and generally make life easier. **Auto company locks** will automatically lock in data the first time a new company card is inserted and the **product version** can now be easily found on the INFO menu. Control authorities and workshops wanted to see the status of the **Second source of motion** on the technical printout – this has also been added.
